

## **AR Protein Crystal**

Catalog: CBCRY23

## PRODUCT INFORMATION

Name	AR Protein Crystal
Cat No.	CBCRY23
Fragment	Residues 669-918
<b>Protein Description</b>	Androgen Receptor
Background	Androgen receptor (AR) is a ligand-inducible steroid hormone receptor that mediates androgen action, determining male sexual phenotypes and promoting spermatogenesis. As the androgens play a dominant role in male sexual development and function, steroidal androgen agonists have been used clinically for some years. However, there is a risk of potential side effects and most steroidal androgens cannot be dosed orally, which limits the use of these substances. 1,2-Dihydro-6-N,N-bis(2,2,2-trifluoroethyl)amino-4-trifluoromethyl-2-quinolinone (L GD2226) is a synthetic nonsteroidal ligand and a novel selective AR modulator.
<b>Protein Classification</b>	Ligand Binding Protein
Structure Weight	29541.62 Da
Method	X-Ray Diffraction
Resolution	2.8Å
<b>Ligand Chemical Component</b>	$ 6\hbox{-}[Bis (2,2,2\hbox{-}Trifluor oethyl) Amino]-4\hbox{-}(Trifluor omethyl) quino lin-2 (1H)-one. \\$
