

# NBD-DOPE Fluorescent DDAB/CHOL Cationic Liposome

## Catalog: Lipo-177RG

### PRODUCT INFORMATION

<b>Name</b>	NBD-DOPE Fluorescent DDAB/CHOL Cationic Liposome
<b>Cat No.</b>	Lipo-177RG
<b>Product Overview</b>	Cationic liposomes are traditionally used for the delivery of genetic materials such as various types of DNA (pDNA, cDNA, CpG DNA, oligonucleotide, antisense oligonucleotide, etc.), various types of RNA such as (siRNA, mRNA, etc.) and nucleic acid mimics (NAMs). DDAB is a kind of lipid which has one positive charge per MOLECULE. Using DDAB in liposome can neutralize the negative charge of pDNA with positive charge of cationic lipids in order to capture more plasmid efficiently mainly due to electrostatic interaction and deliver them into the cells.
<b>Lipid Composition</b>	DDAB/CHOL(2/2mM) DDAB: Dimethyldioctadecylammonium (bromide salt (DDAB) CHOL: Cholesterol
<b>Form</b>	Liquid
<b>Storage Buffer</b>	Deionized RNase-free Water, pH 7
<b>Concentration</b>	Lipid Concentration 4mM
<b>Stability</b>	2 months
<b>Storage</b>	2 °C to 8 °C (do not freeze)
