	The liposomes are prepared by the extrusion method to about 100nm with tight particle size distribution. The
	roduct is sterile filtered and filled in sterile vials guaranteed to be stable for 6 months when stored in refrigerat
	or. The phospholipid, Oregon Green 488 DHPE is labeled on the head group with the green-fluorescent Oregon
	n Green® fluorophore with excitation/emission maxima ~496/524 nm. This fluorinated analog of fluorescein of
Product Overview	vercomes some of the key limitations of fluorescein, including greater photostability and a lower pKa (pKa ~
	4.7 versus 6.4 for fluorescein), making its fluorescence essentially pH insensitive in the physiological pH rang
	e.
