

# DSPE-PEG-NHS

## Catalog: Lipo-511

### PRODUCT INFORMATION

<b>Name</b>	DSPE-PEG-NHS
<b>Cat No.</b>	Lipo-511
<b>Product Overview</b>	1,2-Distearoyl-sn-Glycero-3-Phosphoethanolamine (DSPE) conjugated polyethylene glycol with active succinimidyl ester (DSPE-PEG-NHS) is a linear heterobifunctional PEGylation reagent with a DSPE phospholipid and an active ester group. It is a useful self-assembling reagent to prepare PEGylated liposome or micelle while also providing a NHS group for conjugation with amine-containing moieties or ligands. It is often used in targeted drug delivery with the lipid bilayer to improve drug solubility, the PEG to provide stealth property, extend circulation half-life and reduce non-specific protein binding or cell adhesion, and the acid group to bioconjugate targeting molecules including antibody, aptamer, protein, and peptide.
<b>Purity</b>	>95%
<b>Application</b>	Liposome production; Synthetic lipid
<b>Storage</b>	Store at -20 °C
<b>Synonyms</b>	1,2-distearoyl-sn-glycero-3-phosphoethanolamine-N-[succinimidyl(polyethylene glycol)]
