

DLPE-PEG-NH₂

Catalog: Lipo-525

PRODUCT INFORMATION

Name	DLPE-PEG-NH ₂
Cat No.	Lipo-525
Product Overview	<p>1,2-Dioleoyl-sn-glycero-3-phosphoethanolamine (DLPE)-polyethylene glycol-amine (DLPE-PEG-Amine, DLPE-PEG-NH₂) is a linear heterobifunctional PEGylation reagent with an unsaturated DLPE phospholipid and a n amine. DLPE-PEG-NH₂ is used to modify liposome surface with biomolecules containing amine reactive groups (NHS, thiolate). It is a useful self-assembling reagent to prepare grafted or PEGylated liposome or micelle while also providing an amine group for bioconjugation. It is often used in targeted drug delivery with the lipid bilayer to improve drug solubility, the PEG to provide stealth property, extend circulation half-life and reduce non-specific protein binding or cell adhesion, and the amine group to bioconjugate targeting molecules including antibody, aptamer, protein, and peptide.</p>
Purity	>95%
Application	Liposome production; Synthetic lipid
Storage	Store at -20 °C
Synonyms	DLPE-PEG-Amine
