

DLPE-PEG-NH2

Catalog: Lipo-525

PRODUCT INFORMATION

Name	DLPE-PEG-NH2
Cat No.	Lipo-525
Product Overview	1,2-Dioleoyl-sn-glycero-3-phosphoethanolamine (DLPE)-polyethylene glycol-amine (DLPE-PEG-Amine, DL PE-PEG-NH2) is a linear heterobifunctional PEGylation reagent with an unsaturated DLPE phospholipid and a n amine. DLPE-PEG-NH2 is used to modify liposome surface with biomolecules containing amine reactive gr oups (NHS, thiolate). It is a useful self-assembling reagent to prepare grafted or PEGylated liposome or micell e while also providing an amine group for bioconjugation. It is often used in targeted drug delivery with the lip id bilayer to improve drug solubility, the PEG to provide stealth property, extend circulation half-life and reduc e non-specific protein binding or cell adhesion, and the amine group to bioconjugate targeting molecules inclu ding antibody, aptamer, protein, and peptide.
Purity	>95%
Application	Liposome production; Synthetic lipid
Storage	Store at -20 °C
Synonyms	DLPE-PEG-Amine
