The liposome is biologically compatible with human skin and has been applied as a powerful tool in various cosmetic technologies. Liposomes can capture and deliver active cosmetic ingredients through layers of the skin right down to the cellular level. Liposomal cosmetics contain various entrapments such as moisturizers, extracts, antibiotics, and functional peptides/proteins in a broad range from creams and gels to ointments.

Creative Biostructure offers cosmetic liposome products for research use only. These liposomes are encapsulated with various active ingredients, such as coenzyme Q10, astaxanthin, alpha-lipoic acid, vitamin C, and so on. Some of our ready-to-use liposomes for cosmetics that are ready for immediate worldwide delivery are listed below. We have extensive experience in liposome manufacturing, providing high-quality liposome products of batch-to-batch consistency and reproducibility. We also provide special custom-made liposome services. If you do not find the liposomes of your interest, please feel free to contact us.
